Banks in the Republic of Moldova operate on a regular and stable basis

In the context of the events in Ukraine, the National Bank of Moldova (NBM) informs the citizens that the banking sector of the Republic of Moldova remains stable, robust and resilient. It has sufficient liquidity to ensure the continuity of its normal operation.

The current level of reform and modernization of the banking sector allows its further development in alignment with the global standards for financial services.

Also, our country has sufficient foreign exchange reserves that can be used in possible crisis situations to ensure financial stability.

The National Bank of Moldova is carefully monitoring the situation from a broad perspective and is prepared, in accordance with its powers, to take the necessary measures to reduce risks and uncertainties.
