NBM launches a new survey to find out the opinion of external sector statistics users

The National Bank of Moldova is the public institution responsible for the production, analysis and publication of international accounts statistics on the external sector evolution (Balance of payments, International investment position and External debt). In order to improve these statistics, National Bank has developed and published on its official webpage the User survey on statistics of the external sector of Moldova [1]. Thus, a better understanding of the users' needs is intended.

This survey is relevant due to growing interest in the external sector statistics. Moldova's economy is an open one, so that the external sector has major implications for it and highlights its structural problems. A challenge in this respect is to move from a consumption-led growth to one supported by investment, production and exports, these indicators being also monitored by the development partners.

The survey was released for all users of statistical data on external sector, regardless of their sphere of activity and purpose of use of such data. Respondents may access it in three language versions - English, Romanian and Russian.
